

**The Valident Brand Icon indicates a dental practice website uses securely encrypted e-messaging facilities.** Data entered in the Valident website templates by patients or referring dentists are transferred in encrypted format via dedicated ISO 27001 hosting facilities. At no stage is this encrypted data converted into plain text format until the receiving Data Controller deciphers it with the use of a unique Valident Safe Key Password (SKP).

Valident is designed to bring confidence and trust to patients and referring practitioners knowing that a practice complies with all aspects of the Data Protection Act 1998 in order to protect sensitive personal data online.

Dr. Nigel Knott BDS LDS RCS (Eng.)
